

Kanguru – Bio Drive

SecureWave Certification Number: CERT-SDC-06-05-00004

The Kanguru Bio Drive is a highly advanced USB2.0 flash drive that has a built in biometric sensor to secure your data. Your fingerprint is your password, so you'll never forget the password to this encrypted flash drive! Each drive has an encrypted partition that can only be accessed after a fingerprint has been authenticated. To access the protected partition, simply insert the Kanguru Bio Drive and place your finger on the Biometric sensor. The sensor will automatically scan your fingerprint and grant access to the protected partition. You can store up to 5 fingerprints on each drive and you have the option to set a recovery password.

Major features include:

- > Store up to 5 fingerprints
- > Can be used on any user level. You don't have to be the Administrator on the PC to use it
- > The security application runs entirely from the Bio Drive so you never have to install software on any computer
- > Software is preloaded and ready to go out of the box
- > Optional password recovery
- > Top grade fingerprint sensor-508 DPI

Sanctuary Device Control

Sanctuary® Device Control extends the enforcement of enterprise policies to I/O devices. Users can access only explicitly authorized devices, such as Kanguru Bio Drive. Sanctuary Device Control manages this by applying an Access Control List (ACL) to each device type. To grant access, the administrator need only associate user or group objects to the authorized device.

Sanctuary® Device Control supports several directory platforms, including Microsoft Active Directory and Novell eDirectory. Sanctuary has also been ported to Windows Embedded platforms in addition to the Windows Server and Desktop versions. Sanctuary Device Control:

- > Ensures USB Security through management of any removable media,
- > Provides complete control and management over all I/O devices through any port including USB, Firewire, WIFI, Bluetooth, etc.,
- > Prevents data theft and data leakage via removable media,
- > Prevents malware introduction via removable media,
- > Audits I/O Device usage,
- > Detects and blocks Keyloggers,
- > Encrypts removable media that may not provide their own hardware based encryption,
- > Enables Regulatory Compliance with enforceable policies that include extensive logging and auditing,
- > Provides centralized logging and retention of an exact copy of all data written to authorized devices using SecureWave's proprietary Shadowing™ technology.

Enforce the use of Kanguru Bio Drive for user authentication and data encryption with Sanctuary Device Control, providing your customers a definitive protection against data leakage as no other removable media could be plugged on without central authorization.

SECUREWAVE SANCTUARY CERTIFIED DEVICE

SecureWave Sanctuary® provides policy-based control over endpoint applications and devices. Using an automated whitelist approach, Sanctuary enables the development, enforcement, and auditing for application and device use in order to maintain IT security, reduce the effort and cost associated with supporting endpoint technologies, and ensure compliance with regulations. Sanctuary links application and device policies to Microsoft® Active Directory™ or Novell® eDirectory® user and user group information, dramatically simplifying the management of endpoint application and device resources. More than 1,300 enterprises worldwide in the financial, government, military, manufacturing and healthcare sectors utilize Sanctuary. SecureWave, named a Red Herring Top 100 Innovator, is headquartered in Luxembourg and services its global customer base via offices in the U.K., Washington D.C. and Research Triangle Park, N.C., as well as a network of reseller and service provider partners worldwide.
