

## Kingston DataTraveler Elite – Privacy Edition

SecureWave Certification Number: CERT-SDC-06-04-00001

Kingston's DataTraveler® Elite – Privacy Edition is an ultra-secure, plug-and-play USB 2.0 Flash drive designed for enterprise use. It is designed to provide full privacy for even your most sensitive mobile business data as a portable storage solution with ultra-fast data transfer and huge storage capacities.

DataTraveler Elite – Privacy Edition features on-the fly, 128-bit AES hardware-based encryption of all data. Its complex password enforcement mechanism gives you unprecedented access control and data protection on Windows-based systems. If the device is lost or stolen, stored data will remain protected even in the harshest conditions.

These advanced features make DataTraveler Elite – Privacy Edition ideal for corporations and organizations that require employees to transport large digital files consisting of confidential documents. Data remains protected whether or not users comply with corporate policies, and companies avoid the financial and legal consequences of lost or stolen data.

## Sanctuary Device Control

Sanctuary® Device Control extends the enforcement of enterprise policies to I/O devices. Users can access only explicitly authorized devices, such as Kingston's DataTraveler Elite USB drive. Sanctuary Device Control manages this by applying an Access Control List (ACL) to each device type. To grant access, the administrator need only associate user or group objects to the authorized device.

Sanctuary® Device Control supports several directory platforms, including Microsoft Active Directory and Novell eDirectory. Sanctuary has also been ported to Windows Embedded platforms in addition to the Windows Server and Desktop versions. Sanctuary Device Control:

- > Ensures USB Security through management of any removable media,
- > Provides complete control and management over all I/O devices through any port including USB, Firewire, WIFI, Bluetooth, etc.,
- > Prevents data theft and data leakage via removable media,
- > Prevents malware introduction via removable media,
- > Audits I/O Device usage,
- > Detects and blocks Keyloggers,
- > Encrypts removable media that may not provide their own hardware based encryption,
- > Enables Regulatory Compliance with enforceable policies that include extensive logging and auditing,
- > Provides centralized logging and retention of an exact copy of all data written to authorized devices using SecureWave's proprietary Shadowing™ technology.

**When used together, DataTraveler Elite – Privacy Edition and Sanctuary Device Control enable organizations to enforce device usage policies while ensuring data confidentiality with removable media hardware encryption. Gone is the risk of losing sensitive information on an unsecured or unauthorized device.**

SECUREWAVE SANCTUARY CERTIFIED DEVICE

SecureWave Sanctuary® provides policy-based control over endpoint applications and devices. Using an automated whitelist approach, Sanctuary enables the development, enforcement, and auditing for application and device use in order to maintain IT security, reduce the effort and cost associated with supporting endpoint technologies, and ensure compliance with regulations. Sanctuary links application and device policies to Microsoft® Active Directory™ or Novell® eDirectory® user and user group information, dramatically simplifying the management of endpoint application and device resources. More than 1,300 enterprises worldwide in the financial, government, military, manufacturing and healthcare sectors utilize Sanctuary. SecureWave, named a Red Herring Top 100 Innovator, is headquartered in Luxembourg and services its global customer base via offices in the U.K., Washington D.C. and Research Triangle Park, N.C., as well as a network of reseller and service provider partners worldwide.
