

Kobil – mIdentity

SecureWave Certification Number: CERT-SDC-06-05-00007

KOBIL mIdentity is the first smartcard terminal worldwide that includes an integrated flash memory for secure mobile corporate solutions. KOBIL mIdentity provides user mobility and security worldwide. At the same time, this combination affords a very high degree of comfort and flexibility. And what is more, numerous applications are available for it: From the certificate-based authentication all the way to hard disk encryption—now there is finally a highly secure way for the user to run the entire range of cryptographic applications with a single device.

Strong authentication, high security digital communications and privacy for data on your hard disk can hardly be achieved without the key prerequisites, such as there are one-time passwords, digital certificates and Smart Cards. Kobil, however, is the only vendor who has combined all of these technologies in a single removable media with secured flash memory.

Sanctuary Device Control

Sanctuary® Device Control extends the enforcement of enterprise policies to I/O devices. Users can access only explicitly authorized devices, such as Kobil mIdentity USB device. Sanctuary Device Control manages this by applying an Access Control List (ACL) to each device type. To grant access, the administrator need only associate user or group objects to the authorized device.

Sanctuary® Device Control supports several directory platforms, including Microsoft Active Directory and Novell eDirectory. Sanctuary has also been ported to Windows Embedded platforms in addition to the Windows Server and Desktop versions. Sanctuary Device Control:

- > Ensures USB Security through management of any removable media,
- > Provides complete control and management over all I/O devices through any port including USB, Firewire, WIFI, Bluetooth, etc.,
- > Prevents data theft and data leakage via removable media,
- > Prevents malware introduction via removable media,
- > Audits I/O Device usage,
- > Detects and blocks Keyloggers,
- > Encrypts removable media that may not provide their own hardware based encryption,
- > Enables Regulatory Compliance with enforceable policies that include extensive logging and auditing,
- > Provides centralized logging and retention of an exact copy of all data written to authorized devices using SecureWave's proprietary Shadowing™ technology.

Kobil mIdentity brings an integrated secured solution to enterprises with one-time password, smart card technology, digital certificates and secured encrypted flash memory on a single device. When coupled with Sanctuary Device Control, enterprises can enforce policy usage of mIdentity devices throughout the organization making sure no other devices can be used while protecting from hardware keyloggers and data leakage.

SECUREWAVE SANCTUARY CERTIFIED DEVICE

SecureWave Sanctuary® provides policy-based control over endpoint applications and devices. Using an automated whitelist approach, Sanctuary enables the development, enforcement, and auditing for application and device use in order to maintain IT security, reduce the effort and cost associated with supporting endpoint technologies, and ensure compliance with regulations. Sanctuary links application and device policies to Microsoft® Active Directory™ or Novell® eDirectory® user and user group information, dramatically simplifying the management of endpoint application and device resources. More than 1,300 enterprises worldwide in the financial, government, military, manufacturing and healthcare sectors utilize Sanctuary. SecureWave, named a Red Herring Top 100 Innovator, is headquartered in Luxembourg and services its global customer base via offices in the U.K., Washington D.C. and Research Triangle Park, N.C., as well as a network of reseller and service provider partners worldwide.
