

IRONKEY – Secure Flash Drive & Internet Protection

SecureWave Certification Number: CERT-SDC-07-04-0029

Unlike ordinary flash drives that leave your files completely exposed, the Cryptochip in the IronKey drive safeguards all your data with high-speed hardware-based encryption. The IronKey Cryptochip also provides strong two-factor authentication for secure identification and login across the Internet. Plus, it interfaces with IronKey's online protection services and the onboard Firefox web browser, letting you surf the Internet without worry on virtually any computer. IronKey features:

- > Hardware Encryption with Online Backup
Military-grade AES encryption, RSA 2048-bit encryption
- > Password Management with Strong Authentication
Password Manager, support for PKI, RSA SecurID & OATH
- > Private Surfing & Secure Tunneling through Wi-Fi Networks
Secure portable browser and high-speed Tor network
- > Rugged Metal Casing: Waterproof & Tamperproof
- > No driver installation necessary

Sanctuary Device Control

Sanctuary[®] Device Control extends the enforcement of enterprise policies to I/O devices. Users can access only explicitly authorized devices, such as an IronKey Secure Flash Drive. Sanctuary Device Control manages this by applying an Access Control List (ACL) to each device type. To grant access, the administrator need only associate user or group objects to the authorized device.

Sanctuary[®] Device Control supports several directory platforms, including Microsoft Active Directory and Novell eDirectory. Sanctuary has also been ported to Windows Embedded platforms in addition to the Windows Server and Desktop versions. Sanctuary Device Control:

- > Ensures USB Security through management of any removable media,
- > Provides complete control and management over all I/O devices through any port including USB, Firewire, WIFI, Bluetooth, etc.,
- > Prevents data theft and data leakage via removable media,
- > Prevents malware introduction via removable media,
- > Audits I/O Device usage,
- > Detects and blocks Keyloggers,
- > Encrypts removable media that may not provide their own hardware based encryption,
- > Enables Regulatory Compliance with enforceable policies that include extensive logging and auditing,
- > Provides centralized logging and retention of an exact copy of all data written to authorized devices using SecureWave's proprietary Shadowing™ technology.

When used together, the IronKey Secure Flash Drive, IronKey's Internet Protection Services and Sanctuary Device Control provide organizations a highly secured solution to enforce device usage policies while ensuring data confidentiality through military-grade hardware-based encryption - protecting against data leakage as all unauthorized devices, including keyloggers, will be locked out by default.

SecureWave Sanctuary[®] provides policy-based control over endpoint applications and devices. Using an automated whitelist approach, Sanctuary enables the development, enforcement, and auditing for application and device use in order to maintain IT security, reduce the effort and cost associated with supporting endpoint technologies, and ensure compliance with regulations. Sanctuary links application and device policies to Microsoft[®] Active Directory[™] or Novell[®] eDirectory[®] user and user group information, dramatically simplifying the management of endpoint application and device resources. More than 1,800 enterprises worldwide in the financial, government, military, manufacturing and healthcare sectors utilize Sanctuary. SecureWave, named a Red Herring Top 100 Innovator, is headquartered in Luxembourg and services its global customer base via offices in the U.K., Washington D.C., and a network of reseller and service provider partners worldwide.
